ONE SOURCE – PLAN, DESIGN, DEPLOY, MAINTAIN!

Document Imaging and Information Management Integration Solution
(for internal ImageNet distribution only)

As a document imaging service, DocStar represents a powerful toolset to archive and manage the wealth of paper-based documentation that local government agencies regularly amass. Augmenting a wide variety of departmental relational database management systems (RDBMS), and Geographic Information System (GIS) data, DocStar provides the client with the ability to rapidly scan, store and link together within one system a multitude of documents and records. DocStar in conjunction with the ARMADA portal technology allows the user to quickly and efficiently search multiple data sources to return valuable information pertaining to a location, individual, asset, or property translating into greater information retrieval and management power. The ARMADA portal further allows the user to leverage computer mapping technology such as Geographic Information Systems (GIS) to perform location-based inquiries to the DocStar database. This combination of simple but powerful tools produces an enterprise-level solution where information becomes:

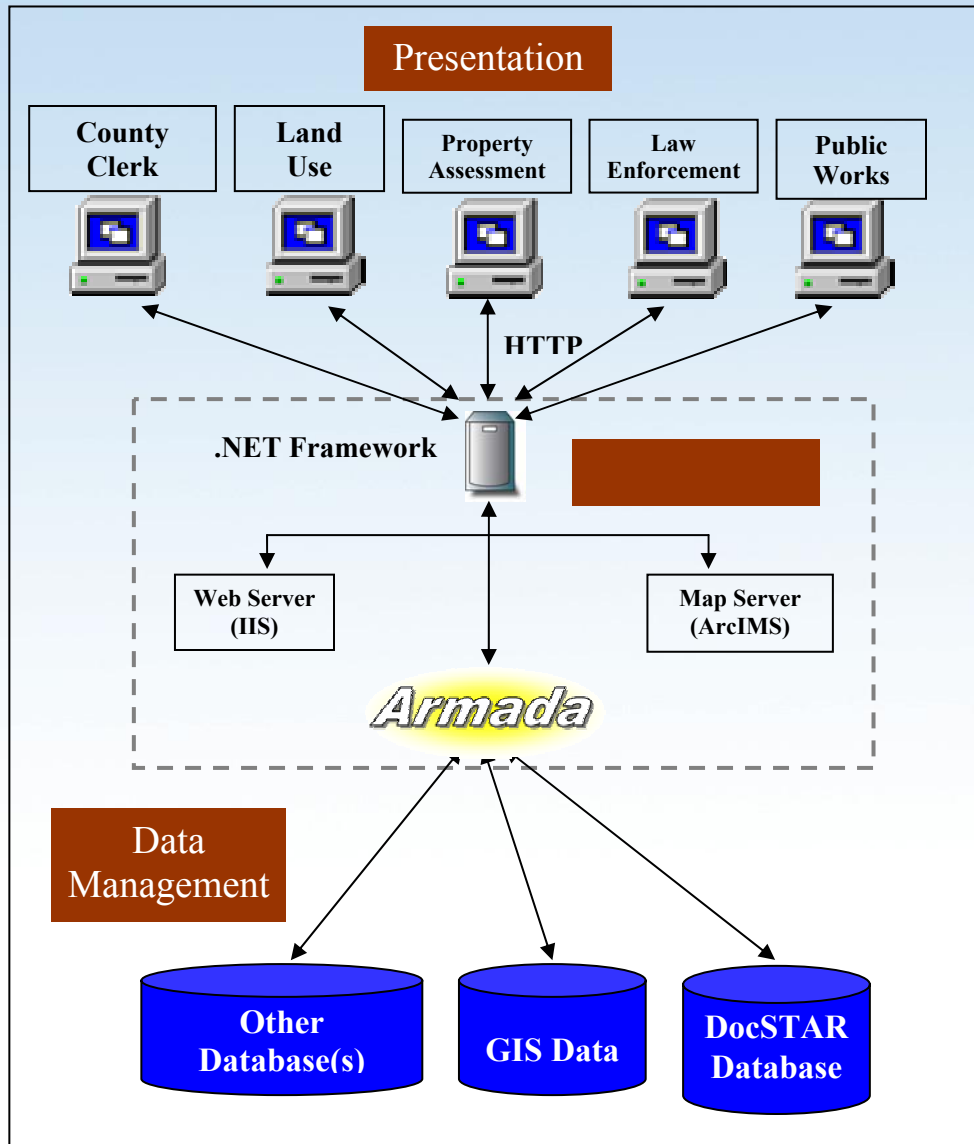

- **Integrated**
- **Enabled**
- **Accessible**
- **Easy to Use**

The ARMADA team approaches implementation of its solution using an ISO 9001:2000 proven/approved methodology of project management, needs assessment, and application development. Because the ARMADA solution is not an “off-the-shelf” one, but rather tailored to your specific needs and requirements, implementation consists of the following phases.

The resulting ARMADA portal solution is one that addresses the individual business process requirements and security constraints of each participating department, while at the same time fosters greater interaction and cooperation within the enterprise. Access to information is dependant on both individual and group login permissions. The portal is developed using

current industry-standard development platform(s) and is openly customizable – which means and/or individual departments.

The ARMADA Team

The ARMADA team consists of several partners, each with a logo:

- ImageNet**: A logo featuring a computer monitor and a document.
- GEODECISIONS**: A logo with a stylized "G" and "D" and the text "A Division of Earthlink Planning".
- ESRI Technology**: A logo with a globe and the text "AUTHORIZED BUSINESS PARTNER".
- docSTAR**: A logo with the text "document imaging. Easy. Fast. Smart."
